## Content

- Reviewing the main pages (account manager, principal researcher, co-researcher).
- View of the questionnaire.
- Check of the new user creation.
- General comment regarding all the pages.

## Review

**Account manager:** nicely done easy to understand and when the page is opened. Only thing when going to the questionnaire page it opens a different section, which is fine, but the only way to return into manager page instead of using the browser history to go back. The account manager can add an account but the “add account” button is linked to a page that does not work and has the password visible. We change with the correct page which add new user to the database and the password shows dots instead of the letters.

**Principal researcher:** it works okay, few details there is a small problem with two update buttons in the co-researcher accessibility, but it has been fixed. It accesses the questionnaire like the manager, so it has the same problem that a button to go back to the Principal researcher area as you can see from the page.

**Co-researcher:** looks nice but it has connection to the experiment manager and experiment dashboard which should only be seen by the lab manager both and the principal researcher the experiment dashboard, while the co-researcher should only see experiments approved by the principal researcher.

**New user:** it did not look very good and it was missing the header to make resembles the other pages like the university style page. The code didn't work because it was missing the `db.SaveChanges();` but with that now it works fine. Code easy to understand.

**Generally:** all the pages have the same look are easy to understand and the code look neat and tidy. There is a lack on comments.
